

The sanitary progress and vital statistics of Hawaii

By Frederick Ludwig Hoffman

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 30 pages. Dimensions: 10.0in. x 7.1in. x 0.2in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1916 Excerpt: . . . of plague in 1899 and 1900, when the death rates were, respectively, 31. 2 and 32. 8 per 1, 000 of population. Since then there have been no serious epidemics, and since 1907 the death rate of the city has been below 20 per 1, 000, except during the years 1911 and 1914. The death rates prevailing during recent years may safely be considered an index of a reasonably satisfactory sanitary administration, and in many respects exceptionally so, in view of the special local sanitary and racial problems of the city of Honolulu. Table 3 presents the mortality of the Territory by administrative divisions for the five years ending with 1913. This table emphasizes the important conclusion that the death rate of the city of Honolulu is unquestionably increased by the admission of patients to the local hospitals from the surrounding territory. The death rate of...
